

Duraliner™ Interior Lining Board

PLEASE NOTE THE TECHNICAL UPDATE FROM THE AUGUST 2012 VERSION OF THE BGC DURALINER BROCHURE.

METAL FRAMING

If Duraliner is fixed to heavy gauge (i.e. above 1.6mm thickness) steel framing, it must be battened out with either timber or lightweight steel battens.

FASTENERS

For fixing 6.0mm and 9.0mm Duraliner to lightweight steel framing use No.8 x 20mm self embedding head screws: Typically Buildex Self Embedding Head (SEH) Wing Tek Screws are suggested on steel frames up to 1.15mm.
